

Acceptable radiology procedures

Diagnostic Testing (with or without interventional procedures) with acceptable provider speciality, credentials, and interpretation.

Cardiology and Vascular Surgeons:

- Echocardiogram (including Doppler, Duplex, Color flow of the heart vessels)
- Electrocardiogram (EKG)-Stress test, Cardiac catheterization
- Myocardial perfusion and other nuclear medicine imaging of the Heart
- Pacemaker analysis (non-telephonic)
- Vascular Doppler Study interpretation - not performed by Diagnostic Radiologists
- Percutaneous transluminal coronary angiography (PTCA)

Interventional Radiology

- Catheter angiography - Coronary Computed tomography angiography (CTA)
- Endoscopic retrograde cholangiopancreatography (ERCP)
- Embolization procedures
- Extracorporeal shock wave lithotripsy (ESWL)
- Magnetic resonance arteriogram (MRA)
- Fluoroscopic Guidance
- Genitourinary vascular flow imaging (nuclear medicine)
- Radiofrequency ablation
- Radiation Therapy-Ultrasound Guidance
- Colonoscopy

Neurology

- Electroencephalography (EEG)
- Electromyography (EMG)
- Nerve Conduction Studies
- Nuclear Medicine Brain Imaging
- Sleep Studies (Polysomnography)

Pulmonology

- Pulmonary Function Tests (PFT)
- Pulmonary perfusion and ventilation imaging

Pathology Reports:

Pathology reports with pathologist interpretation (including surgical pathology, cytopathology, etc.) with an interpretation by a pathologist.

The interpretation of the findings by a pathologist as an acceptable physician specialty is acceptable. This is an exception to the face-to-face requirement.

Examples of pathology reports include the following:

- Pathology report from a tissue biopsy (e.g., lung biopsy, bone biopsy, etc.)
- Cell block report
- Cytopathology report of fluids/brushings
- PAP (Papanicolaou) smear report
- Chromosome analysis

Unacceptable radiology procedures

- Pathology Reports-laboratory test only (including surgical pathology, cytopathology, etc.) without an interpretation by a pathologist

Clinical Laboratory Test Results (e.g., “blood test” results, urinalysis results, etc.)

- CBC blood count report; Chemistry profile report
- Hepatitis antigen/antibody tests
- Pleural fluid analysis report
- Rheumatoid factor
- Urinalysis report, Urine culture report
- Urine pregnancy test
- Wound culture report

Diagnostic Test:

- CT Scan/ MRI Scan
- DPN / ABI / ANA Test
- X-Ray / ESR / CRP
- Mammogram
- Bone Density/ DEXA scan
- Ultrasound – Medical imaging
- Arterial Blood Gas Analysis
